

Design Better Learning with AI.

The C.R.A.F.T.™ Toolkit

PRACTICAL TEMPLATES AND EXAMPLES FOR APPLYING THE C.R.A.F.T.™ FRAMEWORK

How context improves outputs across the entire instructional design lifecycle.

- ✓ The C.R.A.F.T.™ Framework — five elements, better outputs
- ✓ AI workflows mapped to every phase of ADDIE
- ✓ Ready-to-use prompts — copy, adapt, use today
- ✓ Practical prompting tips from real-world L&D

Faster Output
First-pass quality

Less Rework
Targeted outputs

Higher Quality
Better results

End-to-End
Full AI use across ADDIE

How to Use This Toolkit.

Your orientation guide to the toolkit

1 Identify your ADDIE phase

Find where you are in the design process — Analyse, Design, Develop, Implement or Evaluate.

2 Select a prompt

Choose the prompt from that phase that fits your current task.

3 Personalise it for your project

Add your own context before running it.

4 Generate a draft

Run the prompt. The output is a starting point.

5 Refine the output

Improve the draft until it is fit for purpose.

6 Apply professional judgement

Review every output before using it. Your expertise matters.

AI supports professional judgement — it does not replace it.

See the challenges AI can help solve

The next section maps the common challenges practitioners face at every ADDIE phase — and shows where AI makes the biggest difference.

Next: AI-Assisted ADDIE Workflow →

AI-Assisted ADDIE Workflow.

How great prompts transform every phase of learning design

01 **Analyse** — *From assumptions to clear diagnosis*

COMMON CHALLENGES

- Stakeholder interviews are time-intensive to schedule and complete
- Training requests often arrive before a full needs analysis is feasible

AI-ASSISTED OPPORTUNITIES

- Synthesise interview notes in minutes
- Challenge the training request with evidence

02 **Design** — *From ideas to structured solutions*

COMMON CHALLENGES

- Writing and validating objectives is a time-intensive iterative process
- Moving from brief to blueprint typically spans multiple working days

AI-ASSISTED OPPORTUNITIES

- Bloom's-aligned objectives in minutes
- Blueprint drafted in hours, not days

03 **Develop** — *From concept to real learning assets*

COMMON CHALLENGES

- Every new project starts content development from scratch
- Review cycles extend timelines and consume significant capacity

AI-ASSISTED OPPORTUNITIES

- First draft generated from your brief
- Closer to finished on the first pass

04 **Implement** — *From content to adoption*

COMMON CHALLENGES

- Launch communications compete for time in tight project schedules
- Learner uptake is shaped by contextual factors beyond the design itself

AI-ASSISTED OPPORTUNITIES

- Comms strategy built into the design
- Messaging tailored to audience segments

05 **Evaluate** — *From activity to measurable impact*

COMMON CHALLENGES

- Evaluation planning is regularly deprioritised under time and budget pressure
- Isolating and evidencing learning impact is methodologically complex

AI-ASSISTED OPPORTUNITIES

- Survey design fast enough to actually do
- Impact story built from evidence

Key Shift

The shift isn't just about working faster. It's about moving from assumption-based to evidence-based decisions, from blank-page anxiety to structured first drafts, and from reactive evaluation to continuous improvement — across all five phases.

The C.R.A.F.T.™ Framework.

Because great prompting is a craft — and every craft has a structure.

C.R.A.F.T.™ is a five-element prompt framework designed for learning and development professionals.

The name is intentional. Great prompting is a craft — and like any craft, it improves with the right structure.

Each element gives the AI the context, clarity and direction it needs to produce targeted, relevant outputs — so you spend less time re-prompting and more time designing.

Use it every time you write a prompt.

C

Context

Set the learning situation, audience and organisational context

R

Role

Define the AI's expertise and expert persona

A

Action

State the specific task you need completed

F

Format

Specify the structure, length and shape of the output

T

Tone

Match the voice, register and style to your audience

THE PROOF

Why context changes everything — same task, two very different results

✗ Weak Prompt

Create training for managers about change.

Generic definition of “change”

Generic communication tips

Generic action plan

Sounds like every course ever created

✓ C.R.A.F.T.™ Prompt

A hospital is implementing a new rostering system and frontline managers are resistant to the change. Act as a senior instructional designer and create a 30-minute workshop for this audience. Include practical coaching conversations and realistic scenarios. Present as a workshop outline. Use plain English.

✓ Audience, context and business problem defined

✓ Constraints and format specified

✓ Expected outcome is clear

Targeted. Realistic. Ready to use.

Find Your Prompt.

Organised by what you need to do — not just by phase

Not sure which prompt to use? Start here. Find the task that matches what you need to do, then go directly to that prompt.

WHAT I NEED TO DO	ADDIE PHASE	PROMPT	PAGE
NEEDS ANALYSIS & DIAGNOSIS			
Evaluate whether a training request is genuinely a training need	Analyse	Stakeholder Training Request Analysis	06
Diagnose a performance issue from stakeholder notes	Analyse	Learning Needs Diagnosis	06
Identify learning gaps from survey or feedback data	Analyse	Learner Survey Analysis	06
LEARNING DESIGN			
Write measurable learning objectives aligned to Bloom's Taxonomy	Design	Learning Objectives Design	07
Design a blended learning pathway with modalities and sequencing	Design	Learning Pathway Design	07
CONTENT & DEVELOPMENT			
Create content for a training slide deck	Develop	Training Content Development	07
Build a complete eLearning storyboard	Develop	eLearning Storyboard	07
COMMUNICATION & LAUNCH			
Brief managers on a new learning program rollout	Implement	Manager Communication Pack	08
Write a learner-facing launch email	Implement	Learner Launch Communication	08
EVALUATION & REVIEW			
Design a post-program evaluation survey	Evaluate	Post-Program Evaluation Survey	08
Review and quality-check a draft learning solution	Evaluate	Learning Solution Review	08

AI-Enabled Prompts by Phase.

Clarify needs, gaps, audiences and business context.

01 Analyse

Clarify needs, gaps, audiences, and business context.

PROMPT 1 — Learning Needs Diagnosis

Stakeholder notes have been submitted outlining a proposed training request. Act as a learning consultant and identify the likely performance issue, capability gap, and whether training is the right solution. Present the output as a short diagnostic summary with recommendations. Use a clear, professional tone.

💡 C.R.A.F.T. CLARIFIER — APPEND TO THIS PROMPT

"Before creating the output, ask me any questions you need about the audience, business need, constraints, goals, or success measures."

PROMPT 2 — Learner Survey Analysis

Learner survey data has been collected from staff impacted by a new system rollout. Act as a senior instructional designer and identify patterns in confidence, knowledge gaps, barriers to performance, and priority development needs. Present the findings in a table with themes, evidence, and recommendations. Use plain English and concise business language.

💡 BEFORE RUNNING THIS PROMPT

Paste your learner survey data directly above it.

PROMPT 3 — Stakeholder Training Request Analysis

A stakeholder training request has been submitted for review. Act as a performance consultant and analyse the request to separate the stated symptoms from likely root causes. Identify the key diagnostic questions that should be asked before designing a solution. Flag any risks, assumptions, or gaps in the information provided. Indicate whether training is the most appropriate solution, a partial solution, or whether a non-training intervention is more likely to address the root cause. Present your findings in a structured table with these columns: Stated Request | Likely Symptoms | Possible Root Causes | Diagnostic Questions | Risks and Assumptions | Recommended Next Step. Use a clear, professional consulting tone.

AI-Enabled Prompts by Phase.

Continued — Design & Develop

02 Design

Structure learning, define outcomes, and shape the solution.

PROMPT 1 — Learning Objectives Design

A workshop on leading teams through change is being designed for people leaders in a corporate organisation. Act as an instructional designer and create measurable learning objectives for the workshop. Align them to Bloom's Taxonomy and present them as a numbered list with one objective per line. Use plain English and a professional tone.

PROMPT 2 — Learning Pathway Design

Frontline managers in a corporate organisation need to develop their ability to communicate change effectively. Act as a learning architect and design a blended learning pathway for this audience. Include recommended modalities, sequencing, and key learning outcomes. Present the output as a structured table. Use a clear, practical workplace tone.

💡 C.R.A.F.T. CLARIFIER — APPEND TO THIS PROMPT

"Before creating the output, ask me any questions you need about the audience, business need, constraints, goals, or success measures."

03 Develop

Turn design intent into real learning assets.

PROMPT 1 — Training Content Development

A 6-slide PowerPoint training deck is being developed for people leaders supporting staff through organisational change. Act as a senior instructional designer and create the full content. Write the actual on-slide text for each slide — title, key messages, one framework slide, one scenario, one action-planning slide, and a summary. Include speaker notes and a suggested visual direction for each. Present as a slide-by-slide table. Use plain English and a professional workplace tone.

PROMPT 2 — eLearning Storyboard

A 10-minute eLearning module on psychological safety is being developed for employees in a corporate workplace. Act as a digital learning designer and write a complete storyboard for the module. Include screen title, learning objective, on-screen content, narration, interaction type, and suggested visual treatment for each screen. Present the output in a structured table using clear, professional instructional design language.

AI-Enabled Prompts by Phase.

Continued — Implement & Evaluate

04 Implement

Support launch, adoption, and learner readiness.

PROMPT 1 — Manager Communication Pack

A new learning program is being rolled out across a corporate workforce and frontline and middle managers need structured communication support. Act as a change and learning consultant and create a manager communication pack. Include key messages, common questions, and practical actions managers should take before, during, and after launch. Present as a briefing document with clear headings. Use a supportive, practical tone.

PROMPT 2 — Learner Launch Communication

A new compliance module is launching across a corporate organisation and all staff need to be informed and motivated to complete it. Act as a workplace learning advisor and create a learner-facing launch email. Explain why the training matters, what learners should expect, and what action is required. Present as a ready-to-send email. Use a clear, motivating, professional tone.

05 Evaluate

Measure quality, impact, and opportunities to improve.

PROMPT 1 — Post-Program Evaluation Survey

A manager development program has recently been completed and participant feedback needs to be gathered. Act as a learning evaluation specialist and create a post-program survey. Assess confidence, relevance, satisfaction, and application to role. Include a Net Promoter Score question. Present as a survey with rating-scale and open-ended questions. After presenting the survey questions, note how each section can be used to identify trends or inform future program decisions. Use a clear, neutral evaluation tone.

PROMPT 2 — Learning Solution Review

A draft learning solution has been developed to support leaders through organisational change and requires a quality review. Act as a senior L&D consultant and evaluate its clarity, relevance, instructional quality, and alignment to business need. Present as strengths, risks, and recommendations. After presenting your recommendations, highlight which findings should most directly inform the next iteration of this solution. Use a constructive, professional tone.

💡 BEFORE RUNNING THIS PROMPT

Paste your draft learning solution directly above it.

Practical Prompting Tips.

Simple ways to get stronger, more useful outputs

Good prompting is not about getting the first prompt perfect. It is about giving the model enough direction to produce useful work, then refining the output until it is fit for purpose.

Use follow-up prompts Your first prompt does not need to do everything. Use follow-up prompts to refine the output, tighten language, change tone, improve structure, or add missing detail.	Start fresh when the thread gets messy If the output starts drifting, repeating, or mixing contexts, begin a new chat. A clean thread is often faster than trying to rescue a confused one.
Give one clear task at a time Prompts work best when the request is specific. Avoid cramming too many unrelated tasks into one prompt unless you clearly structure them.	Refine, don't always restart You do not need a brand-new prompt every time. Often the fastest path is to improve what you already have.
Upload reference material* Upload relevant reference material first — brand guidelines, sample assets, style guides, policy documents, and existing learning materials.	Load brand guidelines & asset examples* Brand rules explain what "good" looks like. Asset examples show how that looks in practice. Using both gives the model a much stronger reference point.
Tell it what to avoid One of the easiest ways to improve output quality. <i>Example: Avoid jargon, overly academic language, and long paragraphs.</i>	Ask for options When tone, structure, or direction matters, ask for alternatives. <i>Example: Give me three versions: one concise, one more polished, one more conversational.</i>
Ask it to flag assumptions If your context is incomplete, the AI will fill gaps silently. Ask it to state any assumptions it has made before responding — this surfaces gaps before they become errors.	The C.R.A.F.T. Clarifier Add this to any prompt to improve relevance before the AI writes anything: <i>"Before creating the output, ask me any questions you need about the audience, business need, constraints, goals, or success measures."</i> You'll see this highlighted at the bottom of selected prompts throughout this toolkit.

Responsible AI Use

Helping Learning Professionals Use AI With Confidence.

Practice-led approaches to AI-assisted learning design.

Amanda Jones

Instructional Designer

Founder, Trainerfy360™

I've spent more than 20 years designing learning across corporate, government and higher education.

When AI arrived, I saw talented instructional designers facing a new challenge — not learning the technology, but figuring out how to use it without sacrificing quality, judgement and good learning design.

That's why I created the **C.R.A.F.T.™ Framework** — a practical framework that helps learning professionals get better results from AI while staying grounded in proven instructional design principles.
